The National Osteoporosis Foundation’s (NOF) Healthy Bones, Build Them for Life® Patient Registry surveys both patients and caregivers about the impact of osteoporosis and low bone mass on individuals’ daily lives.

This information is collected anonymously, combined and analyzed by NOF to map out the patient journey and determine overall progress in bone health. Providing your personal perspective and knowledge will guide and enhance the awareness and educational programs NOF offers, lead to better care and research and help improve the bone health of future generations.

Visit www.nof.org/hbfl to learn more about the Patient Registry.
